Decision-support scope

This dashboard supports price review. It does not replace managerial approval, customer knowledge, or commercial judgement.

Version: v3.4.0

Last updated: 2026-06-12

Model: HistGradientBoostingClassifier

Config: initial

Quotation Pricing Decision Support Dashboard

Interactive price-review support for gross-margin management, competitor positioning, win-probability estimation, and quote-level recommendation.

Quote-Level Recommender

Add one or more product lines, then click Check Quotation. The quote-level win probability is calculated as the arithmetic mean of product-line probabilities.

Quote-level recommendation rules

GMR grid min (%)	GMR grid max (%)	GMR increment (%)	Minimum allowed GMR (%)	Minimum win probability (%)
0,00	60,00	1,00	0,00	80,00

The model evaluates each product line across the selected GMR grid, filters candidates using the quote-level rules above, and selects the candidate with the highest expected gross profit.

Product-line input forms

Product line 1

Remove

Product	Estimated cost per unit	Competitor A price
H1	201746,38	360000,00
Power rating (kW)	Current / proposed GMR (%)	Competitor B price
37,000	45,95	0,00
Quantity	Energy grant amount	Competitor C price
1	222000,00	0,00

Product line 2

Remove

Product	Estimated cost per unit	Competitor A price
E1	1693781,18	0,00
Power rating (kW)	Current / proposed GMR (%)	Competitor B price
200,000	36,57	0,00
Quantity	Energy grant amount	Competitor C price
1	960000,00	2000000,00

+ Add product

Check Quotation

Quote-Level Result

Aggregated model-based recommendation across all product lines in the quote.

Product lines

Mean of product-line probabilities

GMR

32.0%

Weighted by recommended subtotal

profit

860,121

Win probability × gross profit if won

won

893,898

Profit if the quote is won

All product-line recommendations satisfy the selected minimum GMR and minimum win-probability rules.

Product-Level Recommendations

Recommended GMR, price, probability, and gross profit for each product line.

Line	Product	Qty	Recommended GMR	Recommended Unit Price	Recommended Subtotal	Win Probability	Gross Profit
1	H1	1	57%	469,178	469,178	95.4%	20,000
2	E1	1	27%	2,320,248	2,320,248	96.6%	60,000

Gross profit if won is the profit conditional on winning the tender. Expected gross profit is probability-adjusted: win probability multiplied by gross profit if won.

What-if Margin Simulation

Explore how GMR changes win probability and expected gross profit. The default increment is 1%.
